

Who Rules?

The Top 500 Universities in the World 2019

TO NEW BREAKTHROUGHS

Now, more than ever, the world needs new. New thinking, new ideas and new approaches to solve the world's greatest problems.

At the University of Newcastle, Australia, our students and researchers are inspired to bring new into the world.

For over 50 years, our University has focused on delivering superior education to talented students from all walks of life.

Our degrees are shaped around global learning, work placements and entrepreneurial approaches to study.

Our world-class research and innovation creates new thinking, new ideas and new breakthroughs, not just in Australia, but around the world. We're proud that our researchers are among the world's best.

QS World University Rankings®: Welcome

On behalf of the QS Intelligence Unit, welcome to the 15th edition of the QS World University Rankings.

This 2019 edition sees us rank the world's top 1,000 universities for the first time - the best of the 4,700 institutions that were eligible for inclusion. In keeping with this new higher number, we have also increased the number of institutions receiving a specific rank, by moving the point at which we break into bands from 401+ to 501+. We hope this greater degree of accuracy and specificity will be appreciated by students and institutions.

Our reputational surveys continue to move from strength to strength. In this edition of our rankings, we have attained our largest response sample ever. Over 83,000 academic and 42,000 employer responses have gone into the analysis of this ranking.

This equates to more than 1.4 million university nominations, a truly remarkable undertaking (an increase of 38%) as our surveys continue to grow in scale. This increase has occurred during 2018's climate of more intense data protection scrutiny. This is testament to the increasing

importance and significance that employers and academics place on the QS surveys, and the increasing global recognition of our exercise.

We strongly believe that the increasing depth and scope of this exercise offers unparalleled value to students seeking to understand how their prospective university choices are perceived by the global academic community, and by potential employers across the world.

Universities continue to be increasingly productive as far as research output is concerned. This edition of the rankings accounts for papers published (and indexed by Elsevier's Scopus database) from 2012-2016, and citations yielded from these papers across a window stretching from 2012-2017. In total, this equated to almost 13 million papers and 67 million citations. An average institution now has over 47,000 citations from these publication windows; a 22.2% increase year on year. They also publish (on average) close to 5,000 papers; an increase of 12.1%.

There will also be an element of pride evoked by this edition for the 60 institutions featuring for the first time - 13 from Eastern Europe and

ten from the Middle East. 85 locations have at least one institution in the top 1,000 universities in the world. Our top 100 institutions this year come from 21 higher education systems. 494 institutions improved on their performance from last year, whereas 473 received a lower rank. However, in these increasingly competitive times, a lower rank does not signify a weaker or decreased absolute performance.

That our rankings remain a relative, moving target is perhaps evidenced best by our research indicator, where the global citations per faculty average has increased from c. 52 citations per academic faculty member in 2018's edition, to c. 60 citations per faculty member in 2019. Numerous systems, and institutions, have improved their raw Citations per Faculty average - but see their final score drop because the improvement failed to keep pace with this global increase.

The team and I hope you enjoy this 2019 edition of the QS World University Rankings. We have certainly enjoyed creating it for you - whether you are student, academic faculty, administrator, or policymaker.

SHAPING A BETTER WORLD SINCE 1845

Keeping it real: Reflections on fifteen years of ranking universities

"But meanwhile time flies; it flies never to be regained." - Virgil

In geological time, if all of eternity were compressed into a single day, it is said that humanity would have been around for only the last 77 seconds or so. The first university might be the University of al-Qarawiyyin, established in 859AD. In "university time" then, the QS World University Rankings have been around almost 19 minutes.

This feels like a nailed-on analogy sometimes when dealing with universities, many of whom are operating today in ways that may seem somewhat indistinguishable from 30 or 40 years ago. For the most part universities seem slow to evolve and adapt to the pressing times, and as such it is no surprise that rankings such as ours are heralded as a recent phenomenon. So, let's reflect for a moment on what else has happened in fifteen years. The QS World University Rankings are the same age as Facebook (2.2 billion monthly active users); a year older than YouTube (1 billion hours of video watched every day); two years older than Twitter (over 500 million Tweets per day); and five years older than WhatsApp (over 340 million minutes of video calls per day).

Just fifteen years before the rankings were launched for the first time it was 1989: the world-wide web had yet to be invented, very few people carried

a mobile phone, in the UK we still only had four TV channels, and a gallon of gas was less than a dollar in the US. The world was a profoundly different place. Yet, for the most part, the world's most successful universities haven't, on the surface, changed very much.

"They say I'm old fashioned, and live in the past, but sometimes I think progress progresses too fast!"

- Dr Seuss

However, not all may be as it appears on the surface.

Over the course of the past fifteen years, worldwide participation rates are up, international student numbers have doubled, interactive whiteboards and learning management systems have become widespread, research productivity has exploded, MOOCs have emerged and become part of standard operating procedure, and the most progressive universities are now exploring virtual and augmented reality, big data, machine learning, artificial intelligence and the blockchain.

The QS World University Rankings also don't appear to have changed much

on the surface but in fact have evolved considerably. In 2005 we introduced the employer reputation component; in 2007 we switched to Scopus, a larger, richer database of research and citations and began normalising our indicators; in 2009 we introduced "typeahead" style questions in our surveys; in 2011 we excluded self-citations; in 2015 we introduced a method to balance research metrics across subjects; in 2017 we extended our citation window to six years and rebalanced our employer survey analysis to equalize international and domestic responses; and our data definitions have been persistently and relentlessly refined to better specify comparable measures across the over 100 countries from which we gather our data. These microadjustments have been essential to enable the work to consistently adapt and maintain relevance, and it will be fascinating to see what's needed over the next fifteen years to keep pace with the potentially accelerating rate of change in international higher education and research.

One particularly noteworthy trend that seems to have accompanied developments in HE over the past fifteen years is the increasing demand for data at all levels of decision-making and the increasing expectation that it will be made available. The combination of dramatic rises in international study

demand and the elevated expectations regarding the availability of, and trust in, data has offered fertile ground for the emergence of international university rankings with an ever-increasing proliferation of new attempts to rationalise the complex. It was Umberto Eco who said, "Lists are the origin of culture. How does one attempt to grasp the incomprehensible? Through lists."

There are now twenty or more separate organisations compiling global rankings of universities: a veritable cornucopia of lists. How to determine which ones of them matter? From an institutional perspective all such exercises are likely to have something interesting to reveal and from an academic standpoint some may have more merit than others, but it is perhaps through the lens of the market that the relative impact and influence of these lists can be determined. Eschewing the temptation to assertively validate whichever list paints one's own institution in the best possible light is perhaps most easily achieved by determining whether the ranking in question is widely accessed by any audience that matters to us.

This is where QS has become the curator of the ranking that seems to matter most to the most vital audience the tracked documents, estimated reach and social exposure of its nearest rival. In China the QS metrics are almost quadruple those of other tables;

- » The Hobsons International Student Survey of over 60,000 prospective international students (compiled and published prior to QS acquiring that part of Hobsons) confirmed QS as the leading ranking referred to by prospective students;
- » There are even more records in Elsevier's Scopus database referencing the QS rankings than any other non-academic university list;
- » Through direct access and partners' websites we estimate the total traffic footfall on our rankings tables as well in excess of 150m people globally.

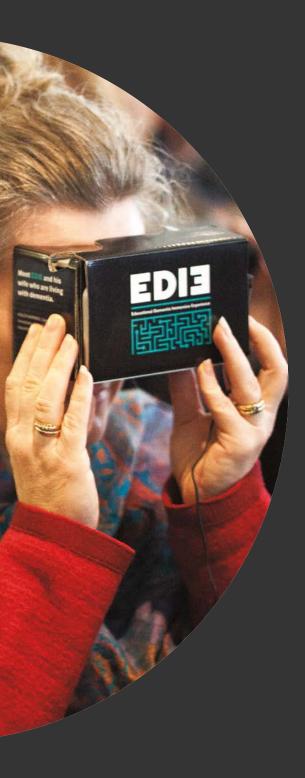

Beyond available statistics, the QS rankings (amongst others) have been drawn upon to inform policy in a variety of ways in many countries including Brazil, Denmark, China, Japan, Malaysia, Singapore, Russia, Kazakhstan, Chile, Netherlands, Thailand, and more.

It has been a dramatic journey, and being at the heart of it, for me personally an exhilarating and challenging one. It would have been easy to have become complacent – both personally, and as an organization-and not realise how influential this project has become. It would have become easy for all involved with QS to take our responsibilities less seriously over time. Similarly, it could have been easy to absorb the praise and the plaudits and the red carpet treatments and to have become self-important, to declare ourselves - myself-an authority.

In reality, I remain continually conscious of how privileged one is to work with universities. Despite criticism the sector is currently receiving, it would be unwise to ignore the fundamental role they are likely to play in solving the most intractable, important problems we face. As such, every time I visit a university I am reminded just how much more vital their work is than mine. And if anything we do, can help any of them do what they do, slightly better or slightly faster, then the past fifteen years, and perhaps the next fifteen, will have been a rare honour.

Virtual technology: a game-changer in dementia care

Sinister shadows. A carpet that looks like a seething column of bugs. Streams of unintelligible instructions. These are some of what users experience when they don EDIE, a virtual reality system developed by Deakin University for Dementia Australia.

Unpleasant though they may be, these EDIE experiences are transforming healthcare for people with dementia, by providing major insights to carers and family about what it's really like to live with dementia.

Deakin researchers, who will be based at the University's new Applied Artificial Intelligence Institute (A²I²), have been working with Dementia Australia (DA) for the past three years, developing products to build understanding and improve dementia care.

DA's showpiece, EDIE (Educational Dementia Immersive Experience), consists of an app and accompanying VR that convey the cognitive changes that may be experienced by a person with dementia through an immersive experience. These changes could include impaired memory, mood, planning or problem solving abilities.

'EDIE has been a game-changer for us,' said Dr Tanya Petrovich, DA's Business Development Manager. 'EDIE is helping us to achieve our vision of improved care for the thousands of Australians with dementia. Users are making changes as a result of their experiences. They are improving furniture and design in homes and residential facilities and their own behaviour in interactions.'

In Australia alone, an estimated 1.2 million people are involved in the care of people with dementia, and more than 425,416 people live with dementia.

Professor Kon Mouzakis, Co-Director of A²I², added that there is an exciting pipeline of projects between Deakin and Dementia Australia. 'There are tremendous opportunities for technology and AI to improve many other areas of healthcare around the world,' he said.

Designing Smarter Technologies

Applied Artificial Intelligence will transform industry and society in the coming decades. An investment of more than \$12m over six years is allowing Deakin to provide cross-disciplinary research on a robust platform of capability, from fundamental science, to software, to product development.

QS World University Rankings 2019: **Methodology**

The 15th edition of the QS World University Rankings maintains its consistent methodology once more this year, with no significant alterations since faculty area normalization was introduced in 2015. The World University Rankings are compiled using six simple indicators that we believe encapsulate university performance at a global level, according to key aspects of their mission. This stability behind the methodology ensures that year-on-year comparisons remain valid, and that volatility in the tables is minimised.

We evaluate universities for the World University Rankings according to the six indicators, designed to capture research efficiency, academic standing, the fostering of graduate employability, class sizes, and the extent to which internationalization is being achieved.

- 1. Academic Reputation (40%)
- 2. Employer Reputation (10%)
- 3. Faculty/Student Ratio (20%)
- 4. Citations per faculty (20%)
- 5. International Faculty Ratio (5%)
- 6. International Student Ratio (5%)

Academic Reputation (40%)

A world-leading university should be recognised as such by the global academic community. For this reason, Academic Reputation receives the highest weighting of any indicator in the rankings (40%). This indicator is based on data from the QS Academic Survey, which, for the 2019 edition of the rankings, accounts for the expert opinions of over 83,000 academics in the higher education space regarding the research quality of the world's universities. This exercise constitutes the world's largest survey of academic opinion, and, in terms of its size and global coverage, is an unparalleled means of measuring sentiment in the global academic community.

Employer Reputation (10%)

Of critical importance to students seeking to make crucial study decisions is the question of future employability. This means that the opinion of employers regarding an institution's capacity to produce reputable, well-prepared graduates provides important insight into university performance.

Our Employer Reputation indicator is based on over 42,000 responses to our QS Employer Survey. This survey asks employers to identify those institutions from which they source the most competent, innovative and employable graduates. As with the QS Academic Survey, the QS Employer Survey is largest of its kind in the world.

Faculty/Student Ratio (20%)

Students typically specify that teaching quality is of the utmost importance when they come to compare, and choose between, prospective universities. Teaching quality is notoriously difficult to measure, especially on a global scale, but we have determined that measuring teacher/student ratios is the most effective proxy indicator for teaching quality. This ratio assesses the extent to which institutions are able to provide students with meaningful access to lecturers and tutors, and recognizes that institutions with a low faculty/student ratio will reduce the teaching burden on each individual academic.

Citations Per Faculty (20%)

Another key part of an institution's mission is research output. We measure institutional research quality using our Citations per Faculty indicator. This indicator is per Faculty so that we can meaningfully compare institutions of different size – an indicator that simply accounted for raw citations output would unduly privilege large, typically wealthier, research institutions.

To calculate this indicator, we take the total number of citations (over six years) received by all papers produced by the institution over a five-year period and divide this by the number of full-time equivalent faculty members at that institution.

All of the research data we use for the QS World University Rankings is provided by Elsevier's Scopus database. The paper period we are using for the 2019 cycle of rankings is 2012 through 2016. For citations, we extend the window to six years, reflecting the fact that it takes time for research to be effectively disseminated throughout the academic community. This makes the citations window for the 2019 cycle of rankings 2012 through 2017.

To account for the fact that different fields have very different publishing cultures we normalise citation and

paper counts. This means that a citation received for a paper in Philosophy is weighted differently to one received for a paper on Anatomy and Physiology, ensuring that, in evaluating an institution's true research impact, both citations are given equal weight, and that institutions that specialize in the Life Sciences and Medicine – where citation yields are typically far higher than in the Humanities – do not receive undue advantage.

We have made one alteration to citation counts for this year. Previously, the five-year window for citations has included the year in which that table was published. For example, last year's release would have taken into account citations received between 2011 and 2016.

All citations data is sourced using Elsevier's Scopus database, the world's largest repository of academic journal data. This year, QS assessed around 13 million papers to compile the rankings.

International Faculty Ratio/International Student Ratio (5% each)

A world-class university should both attract students and appeal to faculty from across the world, and internationalization, when successful, can have myriad indirect positive impacts on institutional performance. There are numerous advantages to having an international student and faculty body–it implies a highly global outlook, which is necessary for working in today's increasingly internationalised higher education sector and global job market. It also provides both students and staff alike with a multinational environment, facilitating exchange of best practices and beliefs; and provides students with international sympathies and global awareness. For the QS World University Rankings, the proportion of international faculty and the proportion of international students are worth 5% each in the weighting.

We welcome any engagement from stakeholders in our ranking regarding our methodology or datasets, and our QS Intelligence Unit can be contacted at rankings@qs.com.

Dr Lee Streeter has come to understand the problem of than anyone else.

He is now looking not only to solve the problem but also to apply the solutions outside the lab to increase productivity in agriculture and industry. It could be used to measure the shape, size and movement of animals, or in horticulture for non-destructive assessment of fruit quality.

Our researchers are creating opportunities to apply new technology to traditional industries, making them more effective and efficient for our future generations.

In the 2019 edition, a total of 60 institutions made their first appearance in the rankings. Eastern Europe and the Middle East provided the largest numbers with 13 and 10 new entrants, respectively.

ONE OF THE WORLD'S GREAT UNIVERSITIES

ANU.edu.au

QS World University Rankings®: **Global Trends**

Martin Ince Chair of the Global Academic Advisory Board of the QS World University Rankings and writer and journalist in the fields of higher education and science

The 15th edition of the QS World University rankings is the richest yet, extending its reach to 1,000 institutions for the first time. But the results are highly consistent with our findings from previous years.

Starting at the top, we see that 2019's top 10 universities are identical to last year, and that the top four - US heavyhitters MIT, Stanford, Harvard and Caltech - are in the same order as in 2018. This is symptomatic of a generally stabilizing US performance: more of the US's 157 ranked institutions rise than fall this year.

The only changes in the top 10 are at fifth and sixth, where Oxford and Cambridge swap places to Oxford's advantage, and between seventh and tenth, where ETH Zurich has traded positions with University College London. Just outside the top 10, we now show the National University of Singapore in 11th place and its neighbour Nanyang Technological University in 12th, where it has lost last year's unprecedented lead over its older rival. The UK's performance, like that of the US, is one of stabilization,

with 41 of the UK's 76 ranked institutions recording improvements.

A look at the ranking's constituent indicator data shows that Oxford's advantage over Cambridge is mainly due to a better result in its number of citations per faculty member, where it is 25 places up on 2018. ETH's rise reflects its improving visibility in a wide range of globally important disciplines, and is mainly attributable to a 47-place leap in its faculty/student ratio. This change is in marked contrast to many of ETH's competitors in the top 20. 14 of them have a lower faculty/student ratio than last year, including all of the top six. Princeton, now in 13th place, is 34 positions lower for this indictor.

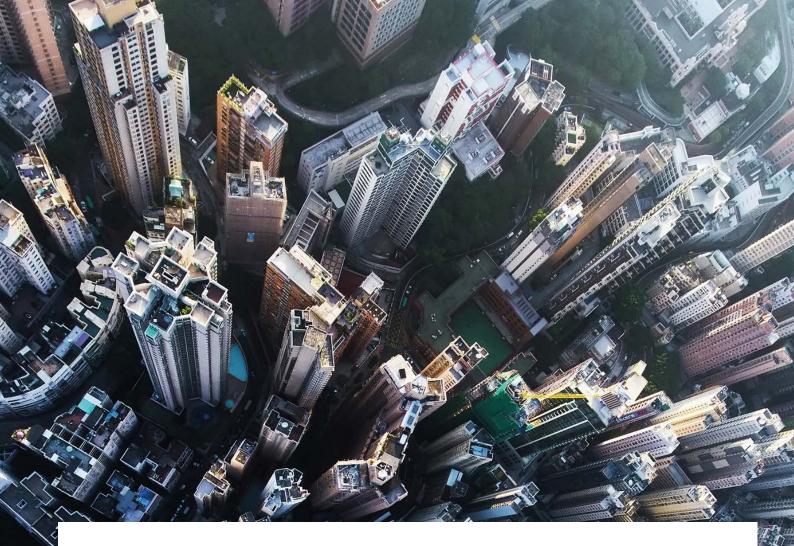

Like our top 10, this year's top 20 is remarkable for its consistency. There are three new entrants: Tsinghua at 17 (the highest rank achieved by a Chinese institution since we began compiling standalone rankings), Edinburgh at 18, and Michigan, up just one place to 20. The biggest loser in the upper echelons is EPFL, ETH's Francophone opposite number, down 10 places to 22. It fell 40 places in our survey of employer opinion.

While Western Europe's universities also staunch the bleeding after two years of struggle, our indicator-byindicator metric data suggests that increasing class studies are becoming an increasingly prominent problem for them as far as rankings improvement is concerned. 181 of Western Europe's 234 ranked universities see their rank for Faculty/Student Ratio drop this year.

Paris rebuilt

Lower down the rankings, the gaps between institutions become smaller and the scope for big moves gets larger. One conspicuous novelty is the arrival of two apparently new French institutions with familiar names, Paris Sciences et Lettres and the Sorbonne, at 50 and 75 respectively. Their appearance is an artefact of the restructuring of Parisian higher education, not of any new universities being created from the ground up in the City of Light.

However, this year's World University Ranking does contain 58 new institutions. Many are here because of the increased number of ranked universities. And while some are in

237 of the institutions we count are in Southern and Eastern Asia

established centres such as Japan, Malaysia and Spain; others are in less prominent university nations.

These new arrivals add a twist to our long-standing interest in the world standing of Asian higher education. Tsinghua is now China's leading university by some distance. It is six places ahead of the University of Tokyo, eight in front of Hong Kong University and 13 places ahead of its Beijing neighbour, Peking University, despite Peking's rise from 38 to 30 since last year. Asian improvement is still visible - especially in Malaysia, which has achieved its first top-100 position in the form of Universiti Malaya – and institutions in the east and south east of the continent have begun to record consistent rises after a year of stagnation.

But another way to look at these results is to note that 237 of the institutions we count are in Southern and Eastern Asia - essentially from Pakistan eastwards - with a further 59 in the Middle East, from Turkey to Iran but excluding Egypt. That means that 296 of the 1000 universities we rank are in Asia. Japan, China and Korea are the leaders, with 44, 40 and 30 ranked universities respectively, but others may be found from Sri Lanka to Azerbaijan and the Palestinian Territory. Six are in Iran, starting with Sharif University of Technology at 432. It will be interesting to track their future development if Iran becomes isolated from the global intellectual community.

And while these rankings are sometimes regarded as being too kind Anglo-American institutions, it is notable that Asia has far more ranked universities than the US and the UK put together. They account for 233 of our 1000 institutions: 157 in the US and 76 in the UK. With seven of Asia's top 10 universities recording improvements this year, one might expect further headline results for the continent in future years.

Despite their welcome stability, there is change in these rankings. The top 200 is regarded as the place to be by many university managers. Only one university in the top 50, EPFL, has moved by more than ten places between 2018 and 2019. But there are three gains of more than ten places between 50 and 100 in this ranking, and four falls. The risers are Zhejiang in China, up 19 places to 68 on the back of improved numbers across the board, Universiti Malaya, up by 27 to 87, and the University of California at Davis, up by 18 to join our four-way tie for 100th place.

But 41 universities now ranked between 101 and 200 have moved by ten or more places here. Universities up by 20 or more positions since 2018 include Bern in Switzerland; Newcastle, Belfast and Liverpool in the UK; the Autonomous University of Madrid in Spain, Scuola Superiore Sant'Anna Pisa in Italy, the Indian Institute of Science Bangalore in India, Universiti Kebangsaan Malaysia (UKM) in Malaysia, Case Western in the US and Tecnologico de Monterrey in Mexico.

My best friend is a robot.

Marine life on Australia's Great Barrier Reef is under threat from the devastating effects of climate change and other localised threats. But a robot is coming to the rescue.

Researchers at QUT's Institute for Future Environments have joined forces with the Great Barrier Reef Foundation, with funding from Google, to develop *RangerBot*, an autonomous underwater vehicle that will enable reef monitoring and pest control on a scale not possible until now.

With its innovative on-board vision system, RangerBot will provide reef managers, researchers and community groups with the real-time data capabilities they need to monitor crown-of-thorns starfish outbreaks, water quality and coral bleaching and help manage these threats.

RangerBot – an autonomous, affordable reef protector.

QS World University Rankings®: An Overview

John O'Leary The Times and Sunday Times Good University Guide and member of the QS Advisory Board

When the QS World University Rankings first appeared, in 2004, some critics claimed that it was misleading to include 200 institutions because there were not that many with a genuinely international profile. That the 15th edition, published today, has reached the 1,000 mark demonstrates not only how the exercise has developed but also how much higher education has changed.

The pressure in today's interconnected academic world is to include more universities, not fewer. However, a global top 1,000 provides a meaningful benchmark both for institutions and prospective students, with this edition still excluding 3,500 listed universities from the published exercise.

The latest edition includes universities in 85 countries, compared with just 29 in the inaugural ranking. Indeed, universities in more than 150 countries were nominated for inclusion by the 83,877 academics taking part in our reputational survey.

Five more countries have universities in the top 200 than in 2004, with Africa, Latin America and the Middle East all

now represented. But the United States still has by far the largest number of universities in this group, with 48, followed by the United Kingdom with 29 and Germany with 12. Seven of the top ten universities and six of the top seven are common to both rankings.

The Massachusetts Institute of Technology (MIT), which was third in the inaugural ranking, is enjoying its seventh year in a row as the global leader. But the academics and employers in our surveys still prefer Harvard, which topped that first edition.

The QS World University Ranking (QSWUR) remains remarkably stable, with average movement in the top 100 of only slightly more than four places since last year. There are no new entrants to the top 10 and only three in the top 20. Edinburgh and Michigan have been there before and have regained lost ground, but the appearance of Beijing's Tsinghua University, in 17th place after a rise of eight places, is significant. It was not in the top 50 at the start of the decade, and its elevation is emblematic of greater success for Chinese universities and those in Asia more broadly.

Mainland China now has 22 universities in the top 500, all but six of them moving up in the latest edition. The Chinese government has set a target for 42 of its universities to be included in leading international rankings by 2050. The "Double World Class Project" will bring extra funding and steer the best high school graduates towards the chosen universities. The scheme is the successor to Project 211, launched in 1995 to promote 100 universities and the 985 Project, established four years later, which set out to create 40 research-intensive universities, which would become internationally competitive.

Asia's other academic powerhouses are in Singapore, which has two universities on the verge of the top 10 and three in the top 500; and in Hong Kong, which has seven universities in the ranking and three in the top 50. South Korea also has two in the top 50 among 30 in the ranking as a whole, and Japan has 44, including five in the top 100. Tokyo has moved up five places this year and is within sight of a return to the top 20.

Elsewhere in the continent, Malaysia now has 13 universities in the ranking, including four new entrants. All of them have moved up since last year, making Malaysia's universities the fastestimproving in the world. India, too, has had a good year, with 24 universities in the world's top 1,000, including five new entrants. The top 10 have all improved or held their positions since the 2018-19 ranking.

The rise of Asian universities has long been predicted, and it seems that finally their performance is beginning to match the hype. In the latest edition, more than a quarter of the universities are located in the Asia/Pacific region – a proportion that would have been considered wildly optimistic when the ranking was first published.

There is a long way to go before US institutions are overtaken at the top of the ranking, however. Budget cuts in the state universities caused a decline overall in last year's ranking, but there has been a recovery in the latest edition, with the top ten all improving or holding their positions and far more of the 157 US universities in this year's expanded ranking improving than declining. Like last year, the top four universities in the world are all American, with Stanford, Harvard and the California Institute of Technology (Caltech) the nearest challengers to MIT.

Last year's decline among UK universities has also been arrested, with nearly twice as many of the country's 76 representatives improving their positions than dropping. Oxford

has overtaken Cambridge for the first time since the ranking was first published, the two ancient universities exchanging fifth and sixth positions. The UK now has 18 institutions in the top 100, compared with 17 last year, and four in the top 10.

Elsewhere in Europe, Russia has had another good year, with all but one of its top 20 universities moving up the ranking and 27 appearing overall. Spain, Austria, Italy, Finland, Denmark and Germany all have more universities in the top 500 than last year. Switzerland has marginally fewer, but ETH Zurich remains the leading institution in the non-English speaking world, having moved up three places to seventh.

The new ranking is more detailed, as well as larger, than its predecessors. The top 500 universities have individual placings, while the next 300 are grouped together in bands, with the final 200 listed alphabetically because the available data is not conducive to meaningful discernment between universities in that band. Universities in Eastern Europe have benefited most from the expansion, with 13 of the new entrants based in that region, compared with 10 in the Middle East and eight in South Asia.

As in previous years, another 21 specialist institutions that do not qualify for the overall ranking but which excel on particular indicators are listed separately. The King Abdullah University of Science and Technology

(KAUST), in Saudi Arabia, for example, has the world's top score for citations per member of academic staff and is in the top ten for the proportion of international staff and students.

Khalifa University, in Qatar, has registered the year's biggest improvement, jumping 141 places to 315th, the highlight of a mixed year for universities in the Middle East. King Fahd University of Petroleum & Minerals (KFUPM), in Saudi Arabia, remains the region's only representative in the top 200.

Latin America has five universities in the top 200, all of which have moved up since last year. The region has a creditable 93 representatives in the ranking as a whole, led by the University of Buenos Aires, in 73rd place, but the majority occupy lower positions than they did last year.

The same is true of African universities, which continue to struggle in the ranking. Cape Town remains the only university in the top 200 and only 17 are ranked in total, more than half of them in South Africa.

Australia's universities remain the most international in terms of the student population, with 39 per cent of those in ranked universities coming from overseas. Switzerland has that distinction for staff, with two-thirds of academics foreign nationals.

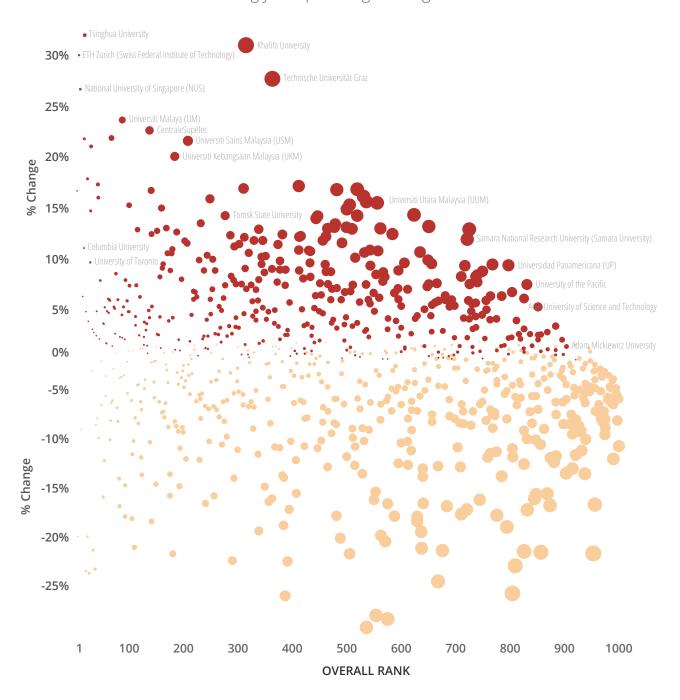

OVERALL RANK: YEAR ON YEAR CHANGE

The plot offers an analysis of the year on year swing for the top 1000 universities. The size of each bubble represents the rank movement while its position depicts the proportional change.

As expected, those institutions in the upper section of the table tend to present a more stable performance, with smaller year on year swings. Reflecting the expansion and coverage of the rankings, the movements are larger in the lower echelons of the ranking. This is testament to an increasingly competitive global higher education environment.

CREATED TO BE DIFFERENT

We believe in, strive for and celebrate the Remarkable.

Griffith was created to be a different kind of university and we know that success often comes from being an exception to the norm—challenging convention, adapting and innovating, creating bold new trends and pioneering solutions ahead of their time.

Take entomologist Professor Dick Drew's work for example. 15 years ago, regions of Vietnam were overrun by fruit flies. Farmers were losing close to 100% of their crop. Using his extensive fruit fly research to inform development of a unique protein bait system, Professor Drew and colleagues enabled a 70% reduction in crop damage. He has since developed the world's first non-toxic fruit fly lure and trap system.

We've never lost sight of our progressive beginnings and everything we do—from education to research and community engagement—is designed to not only meet, but improve the new world our students, graduates and communities will encounter.

BE REMARKABLE

remarkablegriffith.com.au

Plan Ahead.

Advancing technologies for prenatal diagnosis.

Get connected to global opportunities

RMIT is a global university of technology, design and enterprise. Teaching, research and connections to industry are central to creating life-changing experiences for students.

We understand that the future of life and work will be led by those with enterprising minds. That's why our teaching and learning teams are made up of academics and practitioners who know what it means to make it in today's competitive environment, and our research aligns with current and emerging needs of industry across the world.

Studying, working and belonging at RMIT means connecting with a future-focused and truly global community.

Globally, 494 institutions performed higher than in the previous edition, while 473 received a lower rank. The graph below provides a breakdown by country, including the number of rises and falls as well as the average rank variation.

UP AVERAGE RANK CHANGE

UPS AND DOWNS BY COUNTRY

The University of Surrey is a

global community

of ideas and people, dedicated to

LIFE-CHANGING EDUCATION AND RESEARCH

INSPIRING RESEARCH

We've won The Queen's Anniversary Prize for Higher and Further Education on four occasions. The latest for Food and Nutrition.

Our 5G Innovation Centre is the largest UK academic research centre dedicated to developing wireless communications fit for the future.

We are pioneering new approaches to the removal of space debris at Surrey Space Centre.

Our Centre for Vision Speech and Signal Processing (CVSSP) has been pioneering artificial intelligence research for over 30 years. Focusing on Al for Machine Perception, CVSSP is delivering cutting edge research in robotics, autonomous vehicles, biometrics and the creative industries.

We are taking a leading role in the emerging area of Blockchain research through over £3m of UKRI investment drawing together expertise from our GCHQ accredited Centre for Cyber Security, the Centre for Digital Economy (CoDE) within the Surrey Business School, and technical expertise from both CVSSP and 5G.

INSPIRING STUDENTS

- Teaching Excellence Framework (TEF Gold)
- An international community of staff and students from 120 countries
- Global placement opportunities for a Professional Training Year
- 93% of graduates employed after 6 months
- Ranked 121st -130th in QS World Graduate Employability Rankings 2018
- 4th in the World for Hospitality and Leisure Management in QS World University Rankings 2018
- Four Oscars, seven Grammys, and twelve BAFTAs awarded to our alumni

Teaching Excellence

Altai State University is one of the priority members of the University of Shanghai Cooperation Organization (SCO), carrying out a series of network educational programs within the SCO University.

The University has a preparatory department for foreign students studying the Russian Language with subsequent admission to the University.

The University has a high institutional capacity in research and innovation fields:

- 16 laboratories in cooperation with The Russian Academy of Sciences
- 4 research institutes
- Asian Expert-Analitical Center
- Microsoft IT Academy
- Cisco Networking Academy
- Big Data Analysis Center

WHERE DOES EACH COUNTRY'S TOP INSTITUTION RANK THIS YEAR?

The map indicates a North-South divide, with North American, European and Asian institutions dominanting the top 100. Australia and, to a lesser extent, New Zealand and Argentina are exceptions to this rule.

NUMBER OF COUNTRIES FEATURED IN EACH RANK RANGE

THAT KNOWS OUR OUR COMMUNITY MATTERS

CQUniversity Australia is regarded in the Australian higher education sector as a benchmark leader for how universities should engage with the communities they serve. We are committed to harnessing the power of education to change lives and impact our communities.

As Australia's largest regional university, we have a physical presence in every mainland state, and are in the unique position to maintain networks and partnerships across the length and breadth of Australia.

We welcome students from over 140 countries worldwide and enjoy research, teaching and social innovation partnerships across the globe.

Engagement is in our DNA. The communities that we serve are supported through practical, problem solving research partnerships; educational delivery that is student centred, including innovative online learning; and our giving back program which supports disadvantaged communities to access services including education and healthcare.

Get to know us a little better at cqu.edu.au/about

BE WHAT **YOU** WANT TO BE

RESEARCH EXCELLENCE IN MATHEMATICS

WITH OVER 170,000 STUDENTS, WE ARE A BEACON OF KNOWLEDGE WITH A RICH TRADITION OF DIVERSITY.

Future academics and enthusiastic post-graduate students will benefit from the high standard of teaching and research facilities KAU have to offer.

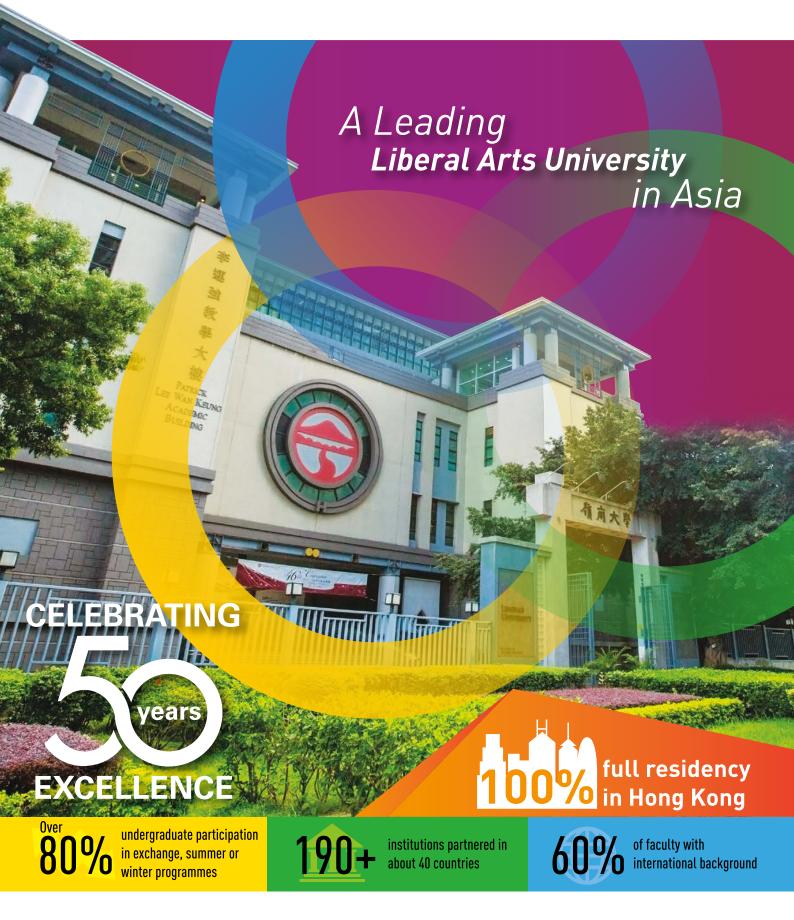

The Future. Inspired by research.

INTERNATIONAL STUDENTS

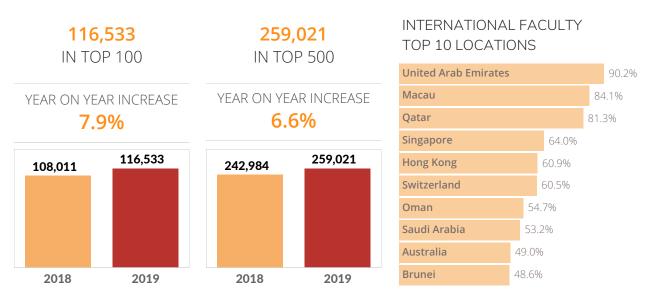

INTERNATIONAL STUDENTS RATIO - TOP 500 INSTITUTIONS

The histogram presents the number of institutions falling into each ratio range.

Proportion of International Students

INTERNATIONAL FACULTY

The United Arab Emirates leads in the international metrics, showcasing its strength as a regional higher education hub.

A group of European countries, Hong Kong, Australia and New Zealand are clearly a magnet for international students, all of them with average ratios higher than 25%. The Middle East and Southeast Asia are particularly active hiring international faculty staff, with Switzerland and Australia also displaying strong average rates in this area.

—and Make the World Ever Better

The University of Rochester is a leading private research university of global consequence.

The Rochester environment fuels innovation and fosters collaborations to take on the world's biggest challenges. Several life-saving vaccines have roots here, including the first HPV vaccine to prevent cervical cancer. Our data scientists created a mobile app to track the spread of influenza. Faculty and graduates of the Institute of Optics have launched more than 160 companies. Our renowned Eastman School of Music is training the next generation of musicians to score music for film and new media. Over a third of our students are international, bringing global perspectives from 148 countries. In turn, Rochester students, faculty, and researchers work in countries around the world to positively impact the lives of others.

rochester.edu

9

Nobel Prize recipients

among faculty and alumni in areas including physics, medicine, physiology, and economics

13

Pulitzer Prize winners

among faculty and alumni in music, poetry, and history

20

Guggenheim Fellows among faculty

73

Fulbright Student Scholars

since 2008

2

Humboldt Prizes

received by faculty in 2017, in optics and chemistry

A proud sponsor of the 2018 EduData Summit

YONSEI UNIVERSITY

Seoul, Korea

Leading the Way to A Sustainable Future

Yonsei University has never stopped working to advance humanity towards more sustainable future. Now by joining hands with Ban Ki-moon, the 8th Secretary-General of the United Nations, We will continue to champion sustainable development goals and rally the world to follow our lead.

Research Metrics

Powered by Scopus'

For the 2019 edition of the QS World University Rankings almost 13 million papers and 67 million citations indexed by Scopus were analysed. Globally, the research output is increasing, with the average institution producing almost 5,000 publications, 12.1% more than in the previous edition. This increase has been more intensively felt in citations, with an average positive shift of 22.2% year on year.

PAPERS AND CITATIONS COUNT

	Data	Difference vs Previous Year
Papers	12,998,103	2.51%
Citations	84,521,489	9.85%
Citations (SCE)	66,746,065	9.25%

Papers period: 2012-2016 | Citations period: 2012-2017

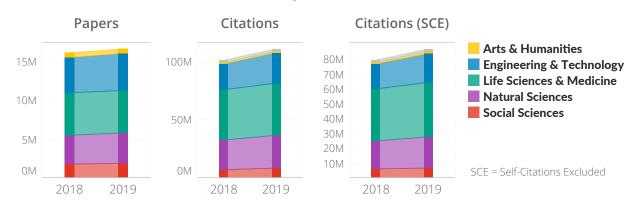

AVERAGE SHIFT IN THE RESEARCH METRICS

	Average	Difference vs Previous Year
Papers	4,964	12.1%
Citations	47,199	22.2%
Citations (SCE)	36,592	22.2%
Impact	4	13.1%

wering Minds

Universiti Kuala Lumpur (UniKL) was established in 2002 under Majlis Amanah Rakyat (MARA), a Malaysian agency under the Ministry of Rural and Regional Development (KKLW). UniKL provides graduates with the knowledge, skills and attitude required to contribute towards and play major roles in a globalised and knowledge-based economy.

Having produced more than 48,000 graduates since its inception, UniKL strategically posits itself as a leading local institution for technical, vocational and entrepreneurial programmes. UniKL actively champions, markets and spread the message of Higher Technical and Vocational Education and Training (HTVET) in its programmes to truly become the apex of technical university for Malaysia.

The philosophy of the university is to offer programmes that meet demands of the global industry, and that students are equipped with all the required knowledge and hands-on industry experience via what is known as Industrialmanship - a concept to introduce UniKL students to industrial culture and real working environment from as early as Semester 1 up to the Final Semester, upon graduation and beyond.

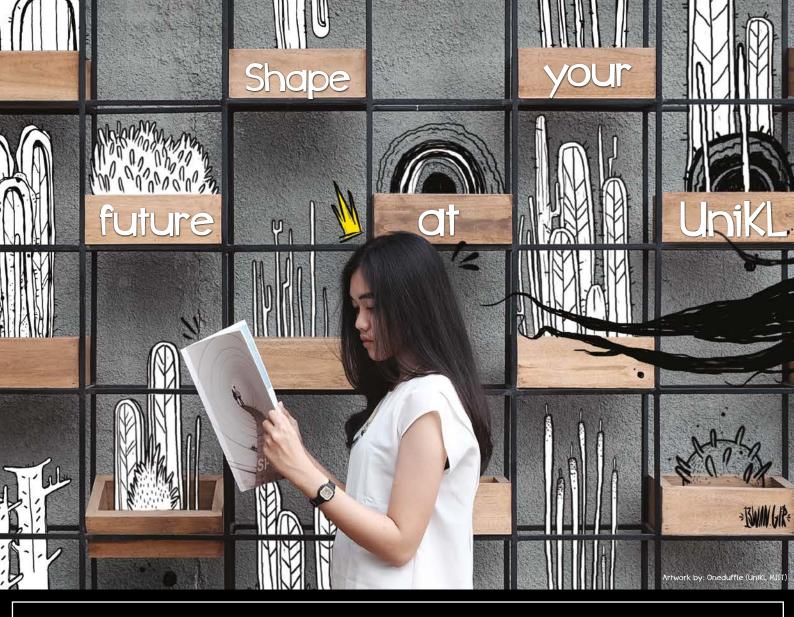

UniKL City Campus where the Chancellery is housed, is located in the heart of Malaysia's capital and commerce area, boasting the tallest University Tower in the country - a 31-story building situated at the heart of the Golden Triangle of Kuala Lumpur. The other 11 campuses are spread all over Peninsular Malaysia where every campus has its own specialization with the concept of 'One Campus, One Specialisation'.

Beyond the general and technical education delivered on campus, UniKL delivers a competitive and dynamic vocational education through strong partnerships with industries and research institutions to apply and commercialise research findings. Today, the university has extensive collaborations with local and international businesses such as Microsoft, Citroen, Aero Bildung, CIMB, CISCO, Hyundai, Oracle and IBM.

As one if its initiatives to improve the delivery in technical education, UniKL has developed its UniKL value-based Higher Technical and Vocational Education and Training (HTVET) model. The four pillars of excellence are: Innovative Teaching and Learning, Quality Curriculum, Academic Professionalism, and Student Enhancement. This model produces human capital who are innovation-driven, entrepreneurial, ethical and professionally skilled in science, technology and trades which is set to make Malaysia a high income nation.

Our investments in research innovation enable us to tackle global challenges in areas as diverse as health, energy, water, food security, cities and culture. The knowledge we create through our research directly informs our teaching, completing the cycle from discovery to delivery and beyond. What we discover today shapes tomorrow.

That's why we're one of the top 100 universities in the world.

Visit leeds.ac.uk to know more.
